

Innovative Drilling Solutions

Rock Drilling Tools

About Company

BIT1 are specialized manufacturers with twenty-five years history in manufacturing rock drilling tools in Korea. Our main products are drifting and tunneling tools, bench drilling tools, down the hole drilling tools, drilling tools or coal mining and diamond wire saw and so on. The products are widely used in surface drilling, underground drifting and tunneling, quarrying, water well industry, etc.

With twenty-five years research and development, BIT1 has piled a diverse experience as a manufacturer in Rock drilling tools. We have been exported rock drilling tools to many countries such as Japan, Russia, U.S.A, Malaysia.

BIT1 consistently continues to offer high quality of products and backup services. BIT1 is always ready to serve you at any time, we look forward to growing together with you.

Patent & Ceritificate

History

1984 Established JOONG YANG MACHINERY INDUSTRY CO., LTD Original equipment manufacturer contract with YOUNG 1987 POONG MACHINERY INDUSTRY CO., LTD Subcontractors contract with WINIA MANDO 1988 (MANDO'S subsidiary - The company have made household appliances; Air conditioning refrigerator etc.) 1990 Engine part supplier contract with KIA MOTOR 1997 Move to the Cheonan factory 2007 Install the second factory in Gwangmyeong 2011 Renamed BIT1

TRICONE BIT	38

Flat Face Button

This design offers 24% more, total carbide area. It's actually a stronger design. Also, this bit has 4 flushing holes instead of 2 flushing holes so will provide you more good cleaning. Useful for hard rock, abrasive rock, homogeneous rock application.

Hard Rock Button

It is designed for the toughest drilling condition with impact carbides and a hardened bit body. The gauge carbides are longer to provide excellent carbide retention. Useful for hard rock, abrasive rock, homogeneous rock application.

Ballistic Button

This bit is designed for use in limestone and other soft rock formations. It looks more pointed shape for the button than spherical buttons. Useful for medium hard rock, abrasive rock, homogeneous rock application.

Drop Center Spherical Button

Normally used in broken rock formations to obtain a straighter hole. This recessed area helps to guide the bit in a straight path, resisting the tendency to follow fractures in the rock. Useful for hard rock, abrasive rock, homogeneous rock, penetration rock application.

Drop Center Ballistic Button

This bit combines the straightening characteristics of the drop center bit with the speed of ballistic buttons. Available in selected sizes in the T thread group. Useful for medium hard rock, abrasive rock, homogeneous rock, penetration rock application.

Retract Spherical Button

Designed for applications requiring very straight hole. The long bit body works very efficiently for the straight hole at the deepest & seamed rock formation. Also cutting part of the bottom of bit body, it acts as a grinder for debris that come from the rock. Useful for hard, medium hard, abrasive fissured, penetration rock application.

Retract Ballistic Button

The long bit body works very efficiently for the straight hole at the deepest & seamed rock formation. Also cutting part of the bottom of bit body, it acts as a grinder for debris that come from the rock. Tips look more pointed shape than spherical buttons. Useful for medium hard, abrasive, homogeneous, fissured, penetration rock application.

CARBIDE SHAPE

Spherical Parabolic Hard rock and ultra-hard rock Medium hard rock and hard rock layers. Effective in a rock layer which causes wear in a great degree. **Ballistic** Conical Soft rock and medium hard rock Limestone. The tip end is sharp and layers. High drilling speed can be the drilling efficiency is excellent obtained compared with cross bit. This bit demonstrates its ability especially in limestone.
